

Enerqa Website Development – Phase 1 Corporate Website and Knowledge Hub Foundation

Scope of Work

1. Background

EnerQA intends to redevelop its website into a modern, professional, and scalable digital platform that serves as both a corporate website and a knowledge hub. The new website should strengthen Enerqa's institutional image, showcase its expertise and projects, and provide a foundation for future interactive tools and portal functionalities.

2. Objective

The objective of this assignment is to design, develop, test, and launch a new bilingual website for EnerQA that is modern, mobile-responsive, SEO-ready, user-friendly, and easy to manage through a content management system (CMS). The website should also establish the basis for a future knowledge portal and digital tools environment.

3. Scope of Services

The selected consultant or company shall provide the following services:

A. Discovery, Planning, and Strategy

- Conduct a kick-off session and discovery meetings with EnerQA stakeholders.
- Review existing website, content, branding, and business requirements.
- Define user journeys, website goals, and functional requirements.
- Develop a sitemap and information architecture for the website.

B. Brand and User Experience

- Refresh the visual direction of the website and align it with a high-quality institutional sustainability brand.
- Develop wireframes and UI mockups for key pages.
- Create a responsive, accessible, and consistent user interface.

C. Website Design and Development

- Design and build a responsive bilingual website (English and Arabic).
- Develop core pages such as:
 - Homepage
 - About Us
 - Services / Domain pages
 - Projects / Case Studies
 - Knowledge Hub / Publications Library
 - Insights / News / Blog
 - Team / Experts
 - Contact page
- Develop a searchable publications/resources section.
- Include a tools overview section that can accommodate future interactive tools.
- Implement global search and clear navigation structure.
- Ensure the site is mobile-first, secure, and scalable.

D. CMS Implementation

- Set up and configure an appropriate CMS.
- Create editable page templates and modules for EnerQA’s internal use.
- Enable content management for pages, publications, insights, and team profiles.
- Provide CMS training and handover documentation.

E. Content Population

- Upload and format client-provided content for the initial website launch.
- Support copyediting and formatting of supplied content where needed.
- Ensure content is properly structured in both languages.

F. Testing, Deployment, and Launch

- Conduct functional testing, browser/device compatibility testing, and UAT support.
- Deploy the website to the live environment.
- Provide launch support and resolve immediate post-launch issues.

G. SEO and Analytics

- Implement basic technical SEO before launch.
- Set up essential metadata, redirects, sitemap, and indexing requirements.
- Integrate analytics and event tracking.
- Provide basic reporting/dashboard setup.

4. Expected Deliverables

At a minimum, the quotation should cover delivery of:

- Discovery and requirements summary
- Sitemap / information architecture
- Wireframes and UI designs
- Responsive bilingual website
- CMS configuration and editable templates
- Publications / knowledge hub section
- Initial content upload
- Testing and launch
- CMS training and handover documents
- Basic SEO setup
- Analytics integration/dashboard

5. Indicative Technical Requirements

The proposed solution should:

- Be mobile-responsive
- Support English and Arabic
- Be SEO-friendly
- Follow accessibility good practice
- Allow easy content updates by EnerQA staff
- Be scalable for future phases such as client portals, interactive tools, API integrations, and AI-enabled features.
